COSC 3V97 Presentation

Fall 2013/14

Scope

Each team will be required to present a seminar during the last two weeks of lectures (Nov. 18-29) following the posted schedule. The seminar is to be an instructional presentation to the class regarding the use of an advanced API used in the project. It is not a description of how the project uses the API, but rather a description of how the API works and the requirements to use it. Of course, the actual usage in the project may be presented as an example.

Timing

The presentation should be timed to 15 minutes including a couple of minutes for questions. Presenters may be cut off if they go overtime.

Presentation

Each member of the team must present a reasonable share of the seminar. The presentation should use appropriate use of resources for presentation such as PowerPoint.

Resources

Presenters may use the resources available in the lecture hall for the presentation. The console computer has basic software available but custom software cannot be loaded. The presentation can be loaded from a USB drive. A laptop can be used as an alternative presentation device, hooked to the video projector via standard A/V cable. This would allow custom software.

Evaluation

Evaluation criteria will include:

- preparedness
- organization
- clarity
- coverage
- use of presentation tools

The mark will be awarded to the team and each member will receive the same mark.
